

Designed for Outdoors

With Dekton® solpuri tables up relaxed in the open air

Combining the clear lines of good design, comfort and sustainable quality is the ambition of solpuri. For life on the sunny side, the German company manufactures purist, timeless furniture that meets the highest standards. Particularly popular with customers: tables with surfaces made of Dekton® by Cosentino.

Munich, 28 March 2023 – For furniture, life in the sun can be like the vacations: beautiful, but too short. “Outdoors, materials are exposed to much more stress, especially UV radiation and temperature changes from hot to frosty or even salty sea air,” knows solpuri's co-manager Florian Mesch, whose family has been manufacturing outdoor furniture for three generations.

Who wants to furnish free spaces in a more sustainable way, must therefore not make any compromises. At solpuri, this applies to the design, the materials and their processing. The frames are made of stainless steel, powder-coated aluminum or TÜV-certified and fair-trade grade A teak, the covers of UV- and weather-resistant high-tech fibers.

“For tabletops, many of our customers choose Dekton,” says Mesch. “They often already know the material from the kitchen studio and may have used it themselves – whether as a furniture surface, floor tile, wall or facade cladding. It is virtually non-porous and therefore stain-, scratch- and weather-resistant. Manufacturer Cosentino offers numerous well-done designs that delight many customers.”

Long-lasting quality - sustainably manufactured

Dekton® consists exclusively of natural and recycled mineral particles that are compacted using 25,000 tons of pressure – 2.5 times the weight of the Eiffel Tower – and sintered at 1,200 °C to form an ultra-compact and ultra-robust surface. Dekton® practically passes through the metamorphic processes that take tens of thousands of years for natural stone in a controlled manner in just a few hours.

The production of the slabs measuring 320 cm x 144 cm in thicknesses ranging from 0.4 cm to 3 cm is carried out using 100% electricity from renewable sources and 99% recycled water. This helps to ensure that Dekton® is CO2-neutral throughout the entire product life cycle. Cutting is done individually, whereby various panel and edge shapes as well as continuous grains, such as for extending tables, can be realized.

The material is highly homogeneous and retains its properties and color permanently – Cosentino guarantees 25 years. “Even if

something does accidentally fall on the tabletop, it won't shatter right away because it is reinforced with glass fibers on the underside," explains Florian Mesch. "It is important to us that customers enjoy solpuri products over a long period of time. And Dekton is almost indestructible."

About Dekton®

Dekton® by Cosentino is an ultra-compact surface for the world of architecture and design. The material consists of up to 20 natural minerals, the chemical composition is completely inorganic. During the manufacturing process, Cosentino uses an exclusive technology that sinters mineral particles under high pressure to make them bond. This innovative process virtually controls and accelerates the metamorphic processes involved in the formation of natural stone.

Dekton® is characterized by outstanding technical properties: The material is fireproof, scratch- and stain-resistant. It absorbs very little water and is therefore not

only particularly dimensionally stable, but also resistant to cold, heat and thermal shock. In addition, Dekton® is characterized by outstanding UV and color stability – the material is available in more than 50 different designs and textures, customized designs can also be realized.

Dekton® is able to reproduce any type of material at a high quality level. It is produced in large-format slabs (up to 320 cm x 144 cm) in five different thicknesses (0.4 cm, 0.8 cm, 1.2 cm, 2 cm and 3 cm) and is suitable as a surface for a wide range of interior and exterior applications (facades, floors, paneling, worktops, sinks, etc.)

As part of the commitment to sustainability and a circular economy, various Dekton® colors are produced with recycled materials from the product's manufacturing process. In 2016, Cosentino received an Environmental Product Declaration (EPD) for Dekton®. www.dekton.com

About Cosentino

Cosentino Group is a family business from Spain that operates worldwide, producing and distributing high quality and innovative surfaces for the world of design and architecture. In close collaboration with customers and partners, design solutions of high value are created that are an inspiration in the lives of many people. This goal is achieved with pioneering and top brands in their respective segments such as Silestone®, Dekton® or Sensa by Cosentino® - technologically advanced surfaces that enable the creation of unique environments and designs for private and public spaces. www.cosentino.com
